Verification report of Greenhouse Gases emissions Scope 1 and 2 and Energy indicators

This verification Report is addressed to Amphenol.

Request, Responsibilities and Independence

Following the request made to us by Amphenol, we have verified environmental indicators related to the emissions of greenhouse gases (GHG) and to the energy consumption for Amphenol.

It is the responsibility of Amphenol to prepare and report those indicators in accordance with Amphenol reporting procedures, hereinafter referred to as "the reporting procedures".

It is our responsibility to audit the reporting process and those indicators so that we can formulate an opinion.

We conducted our audit work in an impartial and independent manner, in accordance with the professional practices of the independent third party, based notably on the principles of ISO 14065, ISO 14064-3 and in application of the Code of Ethics applied by all parties involved in Bureau Veritas Certification's work. This Assurance Statement applies to the related information included within the scope of work described below.

Bureau Veritas Certification's responsibilities were to:

- obtain reasonable assurance about whether the Selected Information has been prepared in accordance with the Reporting Criteria.
- form an independent conclusion based on the assurance procedures performed and evidence obtained; and
- report our conclusions to the management of Amphenol.

Nature and scope of work

The scope of our work covered the following indicators reported by Amphenol for the period 1st January to 31st December 2024 and related to the greenhouse gases (GHG) emissions scope 1 and 2, and the energy consumption (the 'Selected Information'):

- GHG emissions scope 1: 38 388 t CO₂ eq
- GHG emissions scope 2:
 - Heat purchased: 4 122 t CO₂ eq
 - Electricity market-based calculation: 314 130 t CO₂ eq or
Electricity location-based calculation: 430 239 t CO₂ eq
- GHG emissions scope 1 and 2 calculated:
 - with electricity market-based calculation: 356 640 t CO₂ eq or
with electricity location-based calculation: 472 749 t CO₂ eq
- Total energy consumption: 1 063 293 MWh

The scope of the reporting covers all worldwide activities for which there exists a physical manufacturing location that the company has operational control over, regardless of whether the facility is leased or owned. Manufacturing includes any added-value activity which is not strictly warehousing or sales offices.

In order to issue a reasonable assurance opinion on this information, we performed our audit work in accordance with our internal methodology, for the verification of data, in particular:

- ✓ we have taken note of the scope of consolidation to be considered for the preparation of those indicators. We checked that those indicators cover all the companies included in the scope of consolidation specified;

- ✓ we gathered the information required for an understanding of the Company's activities, the context in which the Company operates, and the environmental consequences of its activities;

In detail, our audit work was as follows:

- ✓ we ensured that the Company has put in place collection processes aimed at ensuring the reliability and the consistency of the indicators reported. We examined the "reporting procedures" with regard to their relevance, understandability and completeness and, where applicable, taking into account good professional practices;
- ✓ we identified the persons within the Company who are in charge of all or part of the reporting process and we conducted interviews with some of these persons;
- ✓ we inquired about the existence of internal control and risk management procedures set up by the Company;
- ✓ we assessed, on a sample basis, the implementation of the "reporting procedures", in particular the processes for collecting, compiling, processing and auditing information;
- ✓ In order to verify the indicators, we:
 - selected a sample of contributing entities within the scope of consolidation, based on their activity, their contribution to the Company's consolidated data, their location and the results of work carried out during the previous year,
 - performed on site audits¹ and remote audits²,
 - the sample thus formed for our audit work represents:
 - 46% of total energy consumption and
 - 45 % of scope 1 and 2 total GHG emissions (electricity market-based) or 51 % of scope 1 and 2 GHG emissions (electricity location-based)
 - carried out detailed tests on a sample basis checking the correct application of "reporting procedures", reconciling data with supporting documents, checking calculations and the consistency of results.

We also tested the robustness of the data verification process carried out by the team in charge of consolidation, in particular by performing sample checks on the verification of various data, by ensuring the proper application of the verification process in place and the traceability of these internal verifications and the action taken if any discrepancies were identified.

Reporting criteria

Amphenol has written and implemented a guidance to provide instructions for reporting on the ENVIRONMENT & GOVERNANCE indicators used within Amphenol's Sustainable Development Reporting System (SDRS). The key procedures are "Corporate Sustainability Reporting - Guidance for Measuring and Reporting - Part 1 – Environment & Governance".

Limitations and exclusions

Excluded from the scope of our work is verification of any information relating to:

- Activities outside the defined verification period;

¹**USA** (Wallingford HQ Site, Amphenol Aerospace Operations AAO Sydney; Amphenol Advanced Sensors ADVS Freemont; Amphenol Printed circuits APC Nashua); **India** (Amphenol Interconnect India Pvt. Ltd. All Pune); **China** (Hangzhou Amphenol JET Interconnect Technology Co., Ltd.; Hangzhou Amphenol Phoenix Telecom Parts. Co. Ltd; Amphenol FCI NanTong Ltd.; Amphenol FCI Connectors Dongguan Ltd; Amphenol JET (Haiyan) Interconnector Technology Co. Ltd; Amphenol Airwave (Haiyan) Communication Electronic Co., Ltd. Guangzhou Amphenol Sincere FlexCircuit Co., Ltd); **South Korea** (ADVS - Amphenol Sensing Korea Company Limited); **Germany** (FEP Fahrzeugelektrik Pirna GmbH & Co. KGKonfektion Elektronik GmbH, MarktLustenau)

² **USA** (Amphenol Advanced Sensors ADVS ST. Mary's); **India** (Amphenol FCI OEN Connectors Ltd, Kochi); **China** (Amphenol East Asia Electronics Technology (Shenzhen) Co. Ltd. (ASCA); Amphenol High Speed IO Connectors (HSIO); Amphenol Automotive Connection Systems (Changzhou) Co., Ltd; Amphenol Commercial Products (Chengdu) Co. Ltd.; Amphenol Phoenix (Anji) Telecom Parts Co., Ltd (Huzhou); Amphenol Kai Jack (Shenzhen) Co. Ltd; Amphenol Technology (Zhuhai) Co., Ltd.); **Mexico** (Amphenol Optimize (Gran Azteca) – AAO); **Malaysia** (Amphenol FCI Senai)

- Activities outside the scope;
- Tenants: A tenant is a non-Amphenol organization, a person, or a business that uses part of the premises (a floor, a warehouse, a separate building or land) and pays rent to the reporting site. The footprint of non-Amphenol tenants within the boundaries of the entity is excluded. Electricity and water bills, waste generation, etc. supported by these tenants are henceforth excluded from the data reported by the site.

Our verification is risk-based, drawing on an understanding of the risks associated with calculating GHG emission and energy indicators and the controls in place to mitigate these risks. Our examination included assessment, on a limited sample basis, of evidence relevant to the reporting of emission and energy information.

Observations on reporting procedures or the content of the information

Without calling into question the conclusions below, we make the following observations:

A few findings related to scopes 1 and 2 and identified during the audit were not closed but none of those was deemed significant. As they relate to different data sources, they cannot be easily summarized here.

Reasonable assurance statement

On the basis of our methodology and the activities described above, we have conducted a verification of the data relevant for greenhouse gases (GHG) emissions scope 1 and 2, and energy consumption (the 'Selected Information') reported by Amphenol. On the basis of the verification work undertaken these data are fairly stated.
